The Information Gap Between North and South

by Juan F. Rada.....13

Abstract: This paper explores the depth and breadth of innovations around knowledge which mark not only the end of an era, but also many important beginnings. A new concept of literacy is emergig which will blur the lines between learning, knowledge accumulation, arts and entertainment. In the information and knowledge domains, the gap between North and South will shift from one of simple access to one of absorption, interpretation and validity, and will create new demands and new rights.

Overview of the Internet: Origins, Future, and Issues

by Leigh Swain and Gary Cleveland.....16

Abstract: This paper provides a non-technical overview of the Internet. Specifically, it describes its origins and structure, as well as the future of information networks in general. Issues in the creation of information networks are also outlined.

Using the Internet in Libraries

by Edward J. Valauskas.....22

Abstract: The Internet is used by library and information professionals for a variety of reasons - as a reference tool, an expert system providing access to specialists in hundreds of disciplines, and as a communications device. The paper describes Internet tools - Gopher, WAIS, World-Wide Web and Mosaic - and gives instructions on their use. Other resources available on Internet, including online library catalogues, discussion lists, electronic journals and newsletters, and file transfer protocol are also described.

Electronic Communication Within IFLA

by Michel G. Wesseling.....29

Abstract: This article covers the role played by the Koninklijke Bibliotheek (Royal Library), Netherlands in implementing electronic communication within IFLA. Also covered are the methods to obtain access to IFLA information, varying from Internet Gopher and anonymous FTP file transfer to dial up access.

The Impact of Electronic Information on Serials Collection Management

by Hazel Woodward.....35

Abstract: The article covers in detail how electronic information and the electronic journal will impact upon libraries and the management of their collections as well as technical and user services. The factors which need to be assessed for the formulation of a collection management policy for electronic information are defined. A survey of the various CAS-IAS (Current Alerting Services (combined with) Individual Article Supply) services is also provided.

Possibilities for the International Sharing of Retroconverted Map Files

by Tony Campbell.....46

Abstract: A number of projects are underway to convert to machine-readable form catalog records for historical cartographic materials. How might these records be shared in the future? There are two distinct approaches to this question: retrospective (re) cataloguing or retrospective conversion (retroconversion). Retrospective cataloguing emphasizes record quality and therefore seeks the creation of single authoritative records, to which holding statements can be attached. Acceptance of mandatory standards would be a pre-condition of participation. The retroconversion approach, by contrast, stresses the quantity of potential cartographic records available and underlines the importance of providing international access to as many of these as possible. Even though most records are sub-standard, they are better than none at all. The plans by the Consortium of European Research Libraries to create a retrospective database of printed European materials before 1830 can provide guidance on the choice of format and output medium. However, effective access to any cartographic equivalent would require the creation of geographical name and subject thesauri.
